Restriction to one of the following inventions is required under 35 U.S.C. § 121:

- I. Claims 1-19, drawn to a method of treating cellulose fibers, classified in Class 162, subclass 57.
- II. Claims 20-23, drawn to a pulping process, classified in Class 162, subclass 72.
- III. Claim 24, drawn to a cellulose fiber, classified in Class 162, subclass 100.
- IV. Claim 25-48, drawn to a composite building material, classified in Class 428.
- V. Claim 49-67, drawn to method of manufacturing a reinforced cement composite, classified in Class 156.

Inventions (I, II, V) and (III, IV) are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product of Groups III and IV could be made by other processes such as alcohol pulping processes. The product of Group III and IV do not require the agitation of Group I, the pulping of Group II or the curing of Group V and could be made by different processes, such as defibrillating paper pulp.

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case Group I does not require the pulping of Group II or the curing of Group V; Group II does not require the agitating of Group I or the curing of Group V; and Group V does not require the pulping of Group II or the agitating of Group I. The inventions therefore have different modes of operation.

Inventions III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case Group III does not require being used as a composite of Group IV and Group IV does not require the containing cellulose as required by Group III. The inventions therefore have different modes of operation.

Because these inventions are distinct for the reasons given above and have required a separate status in the art as shown by their different classification restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143). Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
